

NEBULOSA IC 1396 Y LA TROMPA DEL ELEFANTE, EN CEFEO

VISIONES DEL UNIVERSO

A deep space photograph showing a vast field of stars. On the left side, there is a prominent, diffuse nebula with a reddish-brown hue, likely composed of interstellar dust and gas. The rest of the image is filled with numerous individual stars of various colors, including white, yellow, and red, scattered across a dark, black background.
